This collection of information is required by 37 CFR 41.31. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.11, 1.14 and 41.6. This collection is estimated to take 12 minutes to complete, including gathering, preparing, and submitting the completed application to the USPTO. Comments concerning this burden may be submitted to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.

If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2.

Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.

PETITION FOR EXTENSION OF TIME UNDER 37 CFR 1.136(a) FY 2006 (Fees pursuant to the Consolidated Appropriations Act, 2005 (H.R. 4818).)		Docket Number (Optional)
Application Number 10/708,433		Filed March 3, 2004
For APPARATUS FOR MOBILE TERMINAL DISPLAY		
Art Unit 2617	Examiner Marcos L. Torres	

This is a request under the provisions of 37 CFR 1.136(a) to extend the period for filing a reply in the above identified application.

The requested extension and fee are as follows (check time period desired and enter the appropriate fee below):

	Fee	Small Entity Fee	
<input type="checkbox"/> One month (37 CFR 1.17(a)(1))	\$120	\$60	\$ _____
<input type="checkbox"/> Two month (37 CFR 1.17(a)(2))	\$450	\$225	\$ _____
<input checked="" type="checkbox"/> Three month (37 CFR 1.17(a)(3))	\$1020	\$510	\$ 1020.00
<input type="checkbox"/> Four month (37 CFR 1.17(a)(4))	\$1590	\$795	\$ _____
<input type="checkbox"/> Five month (37 CFR 1.17(a)(5))	\$2160	\$1080	\$ _____

 Applicant claims small entity status. See 37 CFR 1.27. A check in the amount of the fee is enclosed. Payment by Electronic Funds Transfer. The Director has already been authorized to charge fees in this application to a Deposit Account. The Director is hereby authorized to charge any additional fees which may be required, or credit any overpayment, to Deposit Account No. 13-4365. I have enclosed a duplicate copy of this sheet.WARNING: Information on this form may become public. Credit card information should not be included on this form.
Provide credit card information and authorization on PTO-2038.I am the applicant/inventor. assignee of record of the entire interest. See 37 CFR 3.71.
Statement under 37 CFR 3.73(b) is enclosed (Form PTO/SB/96). attorney or agent of record. Registration number 37,911. attorney or agent acting under 37 CFR 1.34.

Registration number if acting under 37 CFR 1.34. _____

AMENDMENT

Sir:

In response to the Office Action of August 10, 2006, please amend the above-identified application as follows. A Petition for Extension of Time is enclosed. Payment of the petition fee is being authorized via electronic funds transfer. The Commissioner is hereby authorized to debit any extra amount owed or to credit any extra amount paid to deposit account no. **13-4365**.

Amendments to the claims begin on page 2 of this paper.

Remarks/Arguments begin on page 4 of this paper.

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application.

Listing of Claims:

1-3. (cancelled)

4.(previously presented) A mobile terminal for use in a wireless communication system, comprising:

a housing having an inner major surface and an opposed outer major surface and enclosing electronic components operable to transmit and receive telecommunication signals, the inner major surface of the housing including means for providing user input to the mobile terminal;

a display having an inner major surface and an opposed outer major surface and electrically connected to the electronic components in the housing, the display movably mounted to the housing for movement relative to the housing from a first position where the inner major surface of the display is opposite the inner major surface of the housing for at least partially concealing the user input means of the housing and a second position such that the user input means of the housing is exposed and accessible to the user; and

a flip cover having an inner major surface and an opposed outer major surface and electrically connected to the electronic components in the housing, the inner major surface of the flip cover including means for providing user input to the mobile terminal, the flip cover pivotally mounted to the housing and movable relative to the housing and the display between a closed position where the inner major surface of the flip cover is opposite the outer major surface of the display when the display is in the first position and an open position, the flip cover being sized to substantially conceal the outer major surface of the display and the inner major surface of the housing when in the closed position, and

means for rotating the display interposed between the display and the pivotal mounting, the rotating means allowing the display to rotate relative to the housing and the flip cover in a direction perpendicular to the axis of the pivotal mounting for positioning one of the inner major surface or the outer major surface of the display against the inner major surface of the housing or the flip cover.

5.(original) A mobile terminal for use in a wireless communication system as recited in claim 4, further comprising a hinge connecting the housing, the flip cover, and the display, the hinge providing the axis of movement of the housing, the flip cover and the display, and wherein the display rotating means is a movable support attached to the hinge and to an edge of the display.

6.(previously presented) A mobile terminal for use in a wireless communication system, comprising:

a housing having an inner major surface and an opposed outer major surface and enclosing electronic components operable to transmit and receive telecommunication signals, the inner major surface of the housing including means for providing user input to the mobile terminal;

a display having an inner major surface and an opposed outer major surface and electrically connected to the electronic components in the housing, the display movably mounted to the housing for movement relative to the housing from a first position where the inner major surface of the display is opposite the inner major surface of the housing for at least partially concealing the user input means of the housing and a second position such that the user input means of the housing is exposed and accessible to the user; and

a flip cover having an inner major surface and an opposed outer major surface and electrically connected to the electronic components in the housing, the inner major surface of the flip cover including means for providing user input to the mobile terminal, the flip cover pivotally mounted to the housing and movable relative to the housing and the display between a closed position where the inner major surface of the flip cover is opposite the outer major surface of the display when the display is in the first position and an open position, the flip cover being sized to substantially conceal the outer major surface of the display and the inner major surface of the housing when in the closed position, and

a rotational joint mounted between the housing and the display for allowing the display to rotate relative to the housing and the flip cover in a plane about an axis perpendicular longitudinal axis of the housing.

7.(original) A mobile terminal for use in a wireless communication system as recited in claim 6, wherein the display is mounted to the housing at a position along the longitudinal axis of the housing.

8.(original) A mobile terminal for use in a wireless communication system as recited in claim 6, wherein the display is mounted to the housing at a position spaced from the longitudinal axis of the housing.

9.(original) A mobile terminal for use in a wireless communication system as recited in claim 6, wherein the rotational joint allows the display to rotate by at least about degrees.

10.(currently amended) A mobile terminal for use in a wireless communication system as recited in claim 6, wherein the user input means of the housing and the flip cover comprises a keypad apparatus disposed within the housing and the flip cover, the keypad apparatus also electrically connected to the electronic components in the housing so that tactile input can be received.

REMARKS/ARGUMENTS

Applicant hereby requests further examination and reconsideration of the application in view of Applicant's belief that the application is in condition for allowance. Allowance of the application at an early date is respectfully requested.

Claims 4-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Shima in view of Mizuta (EP 1298890). The examiner states that Shima discloses a mobile terminal for use in a wireless communication system, comprising: a housing having an inner major surface (see fig. 4a, item 22a, item and an opposed outer major surface and enclosing electronic components operable to transmit and receive telecommunication signals (see fig. 4b, item 22), the inner major surface of the housing including means for providing user input to the mobile terminal (see fig. 4a, item 3); a display having an inner major surface and an opposed outer major surface and electrically connected to the electronic components in the housing (see fig. 12, item 51), the display movably mounted to the housing for movement from a first position where the inner major surface of the display is opposite the inner major surface of the housing for at least partially concealing the user input means of the housing and a second position such that the user input means of the housing is exposed and accessible to the user; and a flip cover having an inner major surface and an opposed outer major surface and electrically connected to the electronic components in the housing, the inner major surface of the flip cover including means for providing user input to the mobile terminal, the flop cover pivotally mounted to the housing and movable between a closed position where the inner major surface of the flip cover is opposite the outer major surface of the display when the display is in the first position and an open position, the flip cover being sized to substantially conceal the outer major surface of the display and the inner major surface of the housing when in the closed position (see fig. 12; par. 0013-0015, 0093-0096), further comprising means for rotating the display (see fig. 12, item 63).

The examiner correctly notes that Shima does not specifically disclose means for rotating the display interposed between the display and the pivotal mounting, the rotating means allowing the display to rotate in a direction perpendicular to the axis of the pivotal mounting for positioning one of the inner major surface or the outer major surface of the display against the inner major surface of the housing or the flip cover. The examiner relies on Mizuta, which according to the examiner, discloses a mobile terminal for use in a wireless communication system, further comprising a rotational joint mounted between the housing and the display for allowing the display to rotate in a plane about an axis perpendicular longitudinal axis of the housing, wherein the display is mounted to the housing at a position along the longitudinal axis of the housing, wherein the rotational joint allows the display to rotate by at least about 90 degrees (see fig. 4a, 4b), thereby permitting to move the screen in the desired position. The examiner concludes it would have been obvious to one of the ordinary skill in the art at the time of invention to combine these teachings for the simple purpose of easier view to the user.

Applicant gratefully acknowledge the telephone interview of February 8, 2007, during which the references to Shima and Mizuta were discussed. The examiner stood by his rejection as stated in the current office action and summarized above.

The Applicant respectfully submits that independent claims 1 and 6 patentably distinguish from the above references. Claims 1 and 6 recite, *inter alia*, a mobile terminal a

housing, a display movably mounted to the housing for movement relative to the housing, and a flip cover pivotally mounted to the housing and movable relative to the housing and the display. Means for rotating the display, such as a rotational joint, is provided between the housing and the display for allowing the display to rotate. These features, with the advantages described above, are neither taught nor suggested by the references.

Moreover, the examiner has not made a *prima facie* case for obviousness since there is no motivation or suggestion to combine the references. Shima discloses a pivoting three-part phone. Mizuta merely shows a jackknife phone with the traditional housing and flip cover as is well known. A person of ordinary skill in the art would not be motivated by Shima to look to Mizuta to provide a rotational joint for the display. The examiner's argument is merely hindsight reconstruction in view of the presently claimed invention. Shima fails to recognize and thus realize the advantages which the Applicant has achieved in his invention, much less provide the motivation to combine with Mizuta. If the features were indeed obvious, they would have been disclosed in at least one of the references relied upon by the Examiner. Given the advantages of the claimed invention explained in the specification, and the fact that there is no motivation or suggestion for such a design for a mobile terminal, Applicant respectfully requests that the examiner withdraw the rejection.

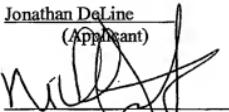

Therefore, Applicant believes claims 4 and 6 define a novel mobile terminal which is not disclosed by the prior art either alone or in any reasonable combination.

Claims 5 and 7-10 of the present application all depend from claims 4 and 6. In addition to the distinguishing features recited in claims 4 and 6 and discussed above, the mobile terminal of the present invention has additional advantageous features defined in the dependent claims which further distinguish the present invention over the prior art. The references do not disclose or suggest these features with their many advantages.

For the foregoing reasons, the Applicant respectfully submits that claims 4-10 are now in condition for allowance. Entry of the amendments and allowance of the application at an early date is respectfully requested.

Respectfully submitted,

Jonathan DeLine
(Applicant)
